**Abstract**

Gold – is a special financial product, which demonstrates its monetary nature from time to time as of periodically destruction of ongoing (since the beginning of 2000) synchronous dynamic between the price of gold and the dollar exchange rates in a period of crisis. However, gold has always been a financial product even with «a touch of monetary». A financial mechanism of gold pricing still exists. The world price of gold is a function from dollar exchange rates plus inflation, other things equal. The gold price as well as the price of other metals, oil gas reacts to dollar exchange rate dynamics with a lever. So we can find the vector of the gold price movement within the dollar cycle and the approximate range of the gold price dynamics under certain conditions. This approach allows you to create a more flexible forecasting model with greater accuracy.

**Keywords:**

gold, the dollar exchange rate, forecast, vector, financialization, monetary nature, synchronization.
