**FINANCIAL STABILITY OF THE BANKING SECTOR OF THE EAEU COUNTRIES IN THE CONTEXT OF THE COVID-19 PANDEMIC**

This article examines the factors that negatively affect the financial stability of the banking sector within the framework of the integration association in the light of the coronavirus pandemic. The stability of the financial system is determined by its ability to dissipate financial imbalances that arise endogenously or as a result of significant adverse and unforeseen events external to the system. In conditions of stability, the system will absorb shocks, primarily through self-correction mechanisms, thus preventing the negative impact of adverse events on the real economy and the financial system itself. Authors conduct the definitions of the financial stability of the central banks of the EAEU member states are given and the effectiveness of measures to achieve financial stability recommended by the Financial Stability Council is considered.

**Keywords:** financial stability, the COVID-19 pandemic, the banking sector of ECO member countries, recommendations of the Financial Stability Board.

**Ksenia V. Trushina**, Candidate of Economic Sciences, Associate Professor of the Department of International Finance, Moscow State Institute of International Relations (MGIMO University)

**PROJECT FINANCING ORGANIZATION: SPECIFICS, PARTICIPANTS, IMPLEMENTATION STAGES**

---

---

The article deals with the organization of project financing, including a mechanism that should provide for measures aimed at effective cooperation and beneficial interaction of all parties to the transaction, since only if these two factors are present will it be possible to achieve the successful implementation of the project and its maximum profitability. Despite the fact that all partners involved in the implementation of the project seem to have one common goal – their interests both at the stage of attracting funding, and at the stages of launching and implementing the project, can vary significantly. This is often due to the fact that participants from different regions and even different countries are involved, which means that they have different legal practices, specific national (or regional) legislation (tax, investment, etc.), which leads to misunderstandings and friction that lead to conflicts. The result of the study is the systematization of knowledge about the organization of project financing in terms of the allocation of funds and the interaction of participants at different stages of the project.

**Keywords:** *project financing, participants, implementation stages, financial relations, organization, estimate, cost reserve, bank, banking services.*

### **DATA QUALITY MANAGEMENT'S SERVICE AS A COMPONENT OF THE DIGITAL PLATFORM OF MODERN BANK**

Data quality is a key success factor for digital transformation of business. Problems with quality of data remain a source of the missed profit and straight financial losses of most banks, caused by fragmentariness of IT infrastructure and extreme complexity of data flows between systems, numerous and non-documented transformations of data in the course of their processing. The problem of data quality management is analyzed in the context of digital platforms development for modern bank. The main result is development of architecture of service for the centralized control and quality management of data performing functions of assessment and continuous monitoring of data quality indicators. A methodological basis of a research are works in the field of the analysis of digital platforms, the data quality standards (GOST P 56215-2014) and modeling of enterprise architecture (TOGAF).

**Keywords:** *data quality, service, digital platform, metrics of data quality, bank.*
